01 INTRODUCTION

Third-year BDes student designing games and immersive environments. I work from research to prototype to critique, and I build what I design: a playable endless-runner game, a research-led app concept taken through three AI-assisted iterations, and 3D environments modelled, lit and rendered in Maya and Unreal Engine. Looking for an internship in game design, immersive environments or UX where I can learn fast and contribute to real production work.

02 KEY HIGHLIGHTS

Game design — Tiger Run, a playable endless runner with survival, hunting, distance-score and conservation loops, built from my own Grade 10 illustration.

Environment art — modelled, textured and rendered a narrative-driven environment; built a Maya forest scene with fog particles and animation.

Lighting — studied natural and artificial light through photography, then recreated a moonlit lake scene in Unreal Engine.

Live UX research: special invitee on a real usability study of a government portal: note-taker, observer and test participant, with SUS scoring.

AI-assisted design — wrote a 17-section design brief, ran 3 Google Stitch iterations and critiqued each against research and usability heuristics.

Systems thinking — Attendance Portal: five-layer anti-cheating design with student, faculty and admin journeys.

03 DESIGNER'S TOOLBOX

3D and real-time — Maya · SketchUp · Unreal Engine · Blender (basic) · AutoCAD (basic)

Design and prototyping — Figma · Google Stitch · Markdown design briefs · Procreate

Craft — Node-based texturing · Motion graphics · Particle effects · Photography

Build and AI — HTML · CSS · JavaScript · Claude · Google Stitch

04 SELECTED PROJECTS

2026 **Tiger Run** · Personal project — game design and build
Endless-runner proof of concept adapted from my Grade 10 wildlife-conservation illustration. Mobile-first controls, stamina and prey mechanics, and rescue-the-cub goals. Play it at pixeljoy1.github.io/aritra-portfolio/play/.

2025 **Live UX research project** · Special invitee, usability study of a national government portal
Note-taker, observer and participant for a month; logged sessions and scored SUS. Client confidential.

2026 **SoleSync** · User-Centred Design and Human-AI Design — UX research and design
Sneaker marketplace with an at-home care service. Research to insights to a Stitch-generated prototype across 3 critiqued iterations; 30+ screen Figma prototype. Survey and interview data simulated for coursework.

2026 **Spatial Narrative and Environment Design** · Environment Design — 3D environment art
From concept and narrative through modelling and texturing to final renders of a textured rooftop-dish building on a rocky base.

2025–26 **Lighting for Immersive Environments** · Immersive Environments and Advanced Lighting
Photo study of natural and artificial light (front, side, back, falloff), followed by a moonlit lake-and-cabin scene in Unreal Engine.

2025 **Stuff and Space** · 3D environment and animation
Maya forest environment from storyboard and moodboard to final render, with a textured moon asset, whirlpool animation and fog particle effect.

05 EDUCATION AND COURSEWORK

O.P. Jindal Global University — Bachelor of Design, Immersive Digital Environments (IDE) · 2024 – 2028 (expected May 2028)

Coursework — Immersive Environments · Lighting · Environment Design · Material and Texture Design · Motion Graphics · User-Centred Design · Human-AI Design · Creative Programming

Interests — Digital illustration · Game history and graphics research · Photography. References available on request.
